Bachelor of Information Technology  
IN721: Design and Development of Applications for Mobile Devices  
Level 7, Credits 15  
**Practical 04: Async Task & List View**

### Assessment Table

| Assessment Activity | Weighting | Learning Outcomes | Assessment Grading Scheme | Completion Requirements |
|---------------------|-----------|-------------------|---------------------------|-------------------------|
| Practicals          | 25%       | 1, 3, 4           | CRA                       | Cumulative              |
| Language Translator | 20%       | 1, 3, 4           | CRA                       | Cumulative              |
| Wishlist            | 25%       | 1, 3, 4           | CRA                       | Cumulative              |
| Exams 1-5           | 30%       | 2, 3, 4           | CRA                       | Cumulative              |

### Conditions of Assessment

This assessment will need to be completed by Friday, 12 June 2020.

### Pass Criteria

This assessment is criterion-referenced with a cumulative pass mark of 50%.

### Submission Details

You must submit your program files via **GitHub Classroom**. Here is the link to the repository you will be using for your submission – <https://classroom.github.com/a/ifyWTPlw>. For ease of marking, please submit the marking sheet with your name & student id number via **Microsoft Teams** under the **Assignments** tab.

### Authenticity

All parts of your submitted assessment must be completely your work and any references must be cited appropriately.

## Policy on Submissions, Extensions, Resubmissions & Resits

The school's process concerning **Submissions, Extensions, Resubmissions and Resits** complies with Otago Polytechnic policies. Students can view policies on the Otago Polytechnic website located at <https://www.op.ac.nz/about-us/governance-and-management/policies>.

### Extensions

Please familiarise yourself with the assessment due dates. If you need an extension, please contact your lecturer before the due date. If you require more than a week's extension, a medical certificate or support letter from your manager may be needed.

### Resubmissions

Students may be requested to resubmit an assessment following a rework of part/s of the original assessment. Resubmissions are completed within a short time frame (usually no more than 5 working days) and usually must be completed within the timing of the course to which the assessment relates. Resubmissions will be available to students who have made a genuine attempt at the first assessment opportunity. The maximum grade awarded for resubmission will be C-.

## Learning Outcomes

At the successful completion of this course, students will be able to:

1. Implement complete, non-trivial, industry-standard mobile applications following sound architectural and code-quality standards.
2. Explain relevant principles of human perception and cognition and their importance to software design.
3. Identify relevant use cases for a mobile computing scenario and incorporate them into an effective user experience design.
4. Follow industry standard software engineering practice in the design of mobile applications.

## Assessment Overview

In this practical, you will complete a series of tasks covering today's lecture. This practical is worth 2% of the final mark for the Design and Development of Applications for Mobile Devices.

The purpose of today's task is to learn about how you can download XML asynchronously (in the background) from the internet, in particular, Apple's RSS feed. This will be the only class in this course/degree where you will do this. Going forward you will be using JSON (JavaScript Object Notation) instead. The JSON technique is a little bit more succinct & you don't have to worry about creating a parser class. Though, it is still important to know about this technique as it is still commonly used in legacy applications. Knowing this technique will help you handle data not only when developing mobile applications, but when developing web applications, etc.

## Task 1

- I have provided starter code in **mobile-course-materials/practicals**. This is going to be like the last practical, where I provide you with starter code & you are expected to complete the application using the lecture slides & online resources. This practical should only require the lecture slides.
- Open up the application in **Android Studio** and familiarise yourself with the file structure, **MainActivity.kt** & **FeedXMLParser.kt**. Note: you won't have to worry about the layouts in this practical.
- Create the four other helper classes in the **helpers** directory as specified in lecture slide 4. This is **FeedAdapter.kt**, **FeedAsyncTask.kt**, **FeedEntry.kt** & **FeedViewHolder.kt**.

## Task 2

- **Do not modify MainActivity.kt & FeedXMLParser.kt**
- Use the code in the slides to complete the four classes. Make sure you comment each class so you know what they do & how they interact with each other. If you are stuck, I can go through the code snippets or you can use Google.
- After successfully completing the classes, run your application. You should see the following screens:

## Submission

- Create a new branch named 04-checkpoint within your practicals GitHub repository

- Create a new pull request and assign Grayson-Orr to review your submission
- Deadline: Friday, 12 June at 5pm

**Note:** Please don't merge your own pull request.
