

College of Engineering, Construction and Living Sciences Bachelor of Information Technology

IN721: Mobile Application Development Level 7, Credits 15

Practical 04: Country API

Assessment Overview

In this assessment, you will design, develop & UI test an application which makes a request to the **Country API** hosted on **GitHub Gist** & displays the data using a **RecyclerView**. This assessment contributes 3% towards your final mark in **IN721**: **Mobile Application Development**.

Learning Outcomes

At the successful completion of this course, learners will be able to:

- 1. Implement & publish complete, non-trivial, industry-standard mobile applications following sound architectural & code-quality standards.
- 2. Identify relevant use cases for a mobile computing scenario & incorporate them into an effective user experience design.
- 3. Follow industry standard software engineering practice in the design of mobile applications.

Assessment Table

Assessment Activity	Weighting	Learning Outcomes	Assessment Grading Scheme	Completion Requirements
Practical	20%	2, 3	CRA	Cumulative
Project	80%	1, 2, 3	CRA	Cumulative

Conditions of Assessment

You will complete this individual assessment inside & outside timetabled class time. This assessment will need to be completed by **Friday**, **16 April 2021** at **5:00 PM**.

Pass Criteria

This assessment is criterion-referenced (CRA) with a cumulative pass mark of 50% over all assessments in IN721: Mobile Application Development.

Authenticity

All parts of your submitted assessment must be completely your work & any references must be cited appropriately including, externally-sourced graphic elements. Provide your references in a **README.md** file. All media must be royalty free (or legally purchased) for educational use. Failure to do this will result in a mark of **zero** for this assessment.

Policy on Submissions, Extensions, Resubmissions & Resits

The school's process concerning submissions, extensions, resubmissions & resits complies with **Otago Polytechnic** policies. Learners can view policies on the **Otago Polytechnic** website located at https://www.op.ac.nz/about-us/governance-and-management/policies.

Submissions

You must submit all program files via GitHub Classroom. Here is the URL to the repository you will use for your submission – https://classroom.github.com/a/VJIq7Ae0. Create a new branch called **04-country-api** from the main branch by running the command - git checkout -b **04-country-api**. This branch will be your development branch for this assessment. Once you have completed this assessment, create a pull request & assign the GitHub user grayson-orr to a reviewer. Do not merge your own pull request. Late submissions will incur a **10% penalty per day**, rolling over at **5:00 PM**.

Extensions

Familiarise yourself with the assessment due date. If you need an extension, contact the course lecturer before the due date. If you require more than a week's extension, a medical certificate or support letter from your manager may be needed.

Resubmissions

Learners may be requested to resubmit an assessment following a rework of part/s of the original assessment. Resubmissions are to be completed within a negotiable short time frame & usually must be completed within the timing of the course to which the assessment relates. Resubmissions will be available to learners who have made a genuine attempt at the first assessment opportunity & achieved a **D grade (40-49%)**. The maximum grade awarded for resubmission will be **C-**.

Resits

Resits & reassessments are not applicable in IN721: Mobile Application Development.

Instructions - Learning Outcomes 2, 3

Task One (2%):

Create a new project with the following configurations:

• Template - Empty activity

- Name CountryAPI
- Package name op.mobile.app.dev.country.api
- Save location /path to your practical GitHub repository/04-country-api
- Language Kotlin
- Minimum SDK API 28: Android 9.0 (Pie)

The application structure is similar to the code examples from the **13-recycler-view** teaching session. Instead, you will request data from the **Country API**.

Familiarise yourself with the following API URL:

https://gist.githubusercontent.com/Grayson-Orr/34991fb3b0192aaf636e56623cbdd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b0945533abbd9d3/raw/7e63d91a981c004a1389e7b094553abbd9d3/raw/7e63d91a981c004a1389e7b094554abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d3/raw/7e63d91a981c004abbd9d2

In recycler_view_item.xml, add two TextViews & an ImageView. You will bind your model data to these Views. However, binding data to an ImageView is not quite straight forward.

Glide is a fast & efficient image loading framework that supports fetching & displaying images. To use Glide, declare the following dependency in build.gradle (CountryAPI.app).

```
dependencies {
    ...
    implementation 'com.github.bumptech.glide:glide:4.8.0'
    ...
}
```

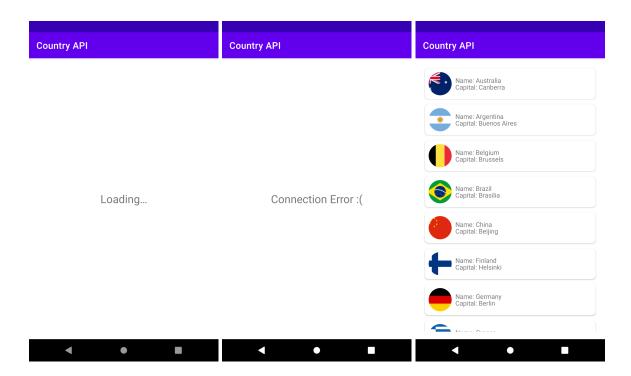

In ServiceStatusBindingAdapter.kt, add the following BindingAdapter function:

```
OBindingAdapter("flagImage")
fun bindFlagImage(imageView: ImageView, imageUrl: String) {
    Glide.with(view.context)
        .load(imageUrl).apply(RequestOptions().circleCrop())
        .into(view)
}
```

Resource: https://github.com/bumptech/glide

In recycler_view_item.xml, declare & set the flagImage attribute to the flag image data in your model.

Run your application on either an Android Emulator or connect device.

Task Three (1%):

Create a new test file called CountryTest. To do this, right-click on op.mobile.app.dev.country (androidTest) > Kotlin Class/File. In CountryTest.kt, write three UI tests. To run your test file, right-click CountryTest.kt > 'Run CountryTest'.
